InventoryTrak™

Manage Your Valuable Plate Inventory

Create Remnants as You Nest

Return Remnants to Inventory and Re-Nest on Them

Create Your Own Remnants and get them off of the Shop Floor

Server version

ShopData provides and supports programmable post processors for all CNC Applications.

Oxy

Plasma

Let Shop Data help you use up your entire plate inventory. With Shop Data's nventoryTrak™ Module you can manage your plate inventory and deplete your inventory as they are nested upon. Purchasing can enter the inventory and monitor it for replenishing. Also, remnants can be returned to inventory and remnants can be drawn and entered into inventory. Track by location, heat number, vendor, prime code, mill certificate and even assign to a job.
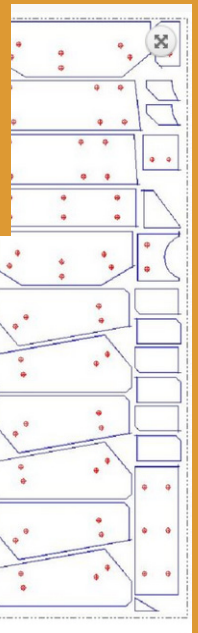

Add Inventory by PO, including all necessary tracking information including heat number, location, mill certification, etc.
